Exercise: Pen tool - straight segments

NVCC

1 Set up a black stroke with no fill. 

Then, select the pen tool from the toolbox. 

2 Starting with grey square #1, click only 1 time. (This places a single anchor point.)

3 Without clicking, move your cursor to grey square #2. Click 1 time on this square.

4 Repeat Step 3 on grey squares #3 and #4.

5 Without clicking slide your cursor back to the first anchor point created. Hover over the first anchor point. You will see a small circle appear. When you see the small circle, click the first anchor point 1 time.

© 2020 Karin Huggens

EXPLANATION:
The small circle that pops up when hovering over the first anchor point connected to a path, is telling you that you are about to close the shape. The path will now be continuous without any breaks in it.
