

Three Interesting Things Chapter 2 and 3

Project Y was the top secret project to build an atomic bomb. Established by the Manhattan Project and in partnership with the United States Army, the planned strategy became one of the defining reasons to end WW2. The scientific project was where the weapons designs were produced, in the Los Alamos Laboratory (Lab) now called the Los Alamos Scientific Laboratory. The Lab's location was ideal because of the remoteness of the area within the Jemez Mountain in New Mexico.

Because it is still Top Secret, Google Maps is not able to show much information

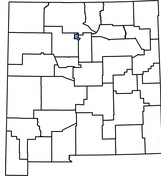

Park that shows the original main gate of the Lab .

Los Alamos County, NM

#2 in Overall Rankings, 

Peer Group: #2 in Urban, High-Performing

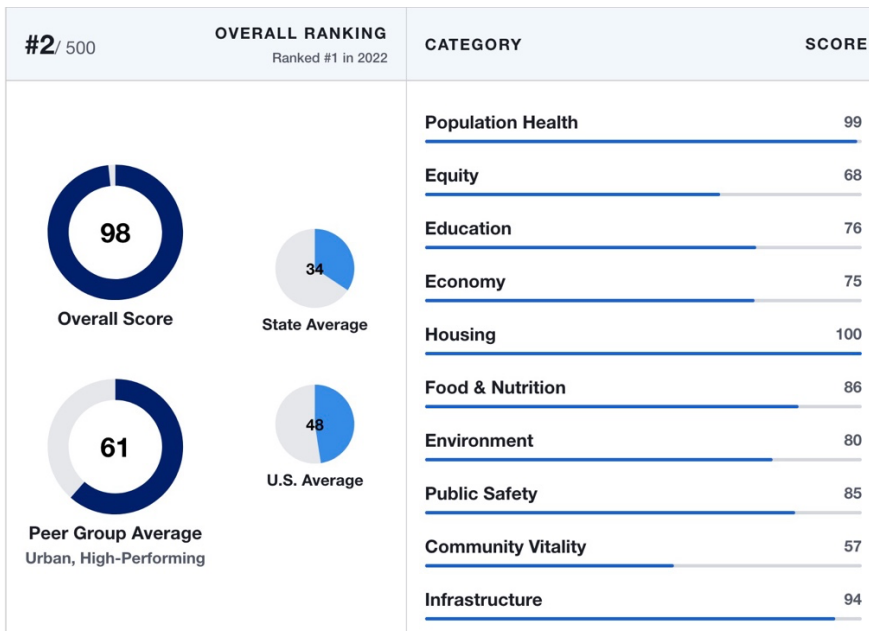

Population

19,253

Land Area

109 SQ MI

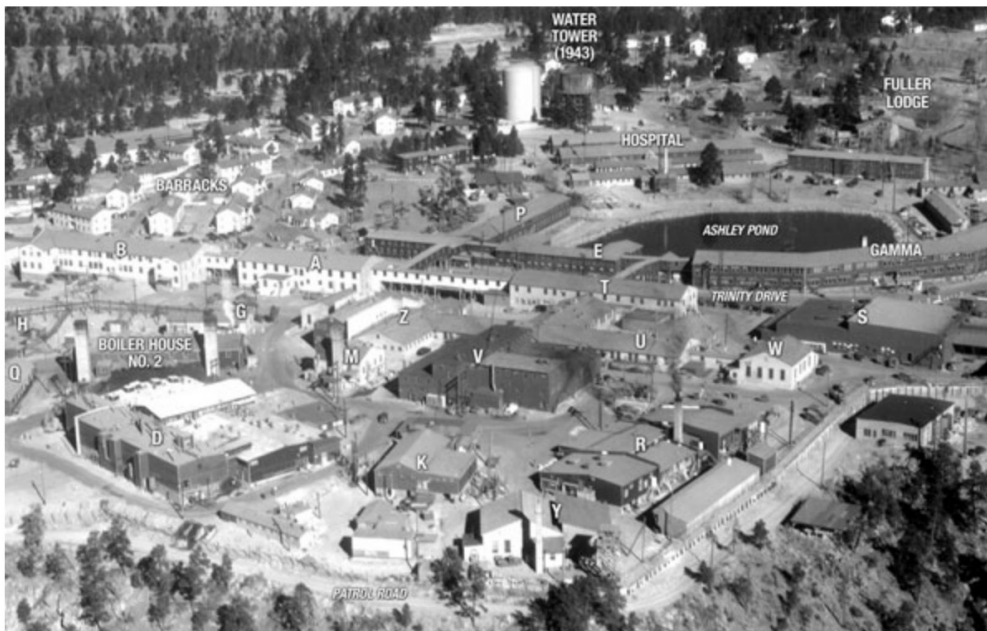

The Lab is top secret and spies still want to know what secrets can be found at the Lab.

“ [the Lab] *Operation Kindred Spirit* was a joint administrative and counterintelligence inquiry launched by the U.S. Department of Energy (DOE) and the FBI in 1996. The operation investigated the potential theft of classified design information regarding the W88 nuclear warhead.” [Link](#) The unsolved mystery is still an open case. [Link2](#)
